

ALFA Systems Integrators, ImageCast IC3 distributor for Puerto Rico, is very pleased with your interest in the latest version of IC3. We believe this software will be of very much help to your company's strategic, engineering and economical needs. Here are some specifications on the product.

The new **ImageCast IC3 v4.0 is a cloning software** that creates or restores image files residing on the local workstation, or saves and restores them from a mapped or network drive. It features a newly designed, easy to use, wizard-based GUI Client and **is the only product on the market that supports Microsoft® SysPrep for Windows NT® and 2000 systems**, USB to USB connections in standalone mode, and spanning for removable media to accommodate larger image files.

Upgrading:

Upgrading with Image Cast is much easier than what you imagine. For example, ImageCast IC3 v4.0 eases the headache of migration to Windows 2000, such as, performing extensive backups, or running duel boot systems during migration. ImageCast IC3 v.4.0 is designed specifically to help make the upgrades go much easier and more efficiently. **By creating a complete image of the operating system setup, ImageCast IC3 v4.0 allows the Windows installation time to be reduced to the amount of time needed to copy it onto almost any system, thereby saving hours on every machine.**

Hassle-free cloning:

IC3 Post Configuration utility automatically injects Windows 2000 Professional registry modifications. In turn, customizing a cloned workstation with its unique User Name, Computer Name, IP Address, Registry Settings, Time Zone settings, and more. **You can easily deploy 100 workstations in twelve minutes using IC3 Post Configuration to customize each individual PC.** The competition still requires the use of a separate utility to customize a workstation, which means the time and cost to deploy multiple workstations increases substantially.

It will do much more than just upgrades:

ImageCast IC3 v4.0 can also be used to restore a user's setup whenever a machine is taken off line for maintenance, repair or replacement. **Standard batch cloning commands can be performed from the wizard, menu options or command line scripting, making version ImageCast IC3 v4.0 a very versatile cloning solution.** Individual partitions can even be gathered from multiple partition drives within a multicast environment. ImageCast IC3 v4.0 also allows for single partition restore.

Administration from one main location:

With ImageCast IC3 v4.0 PCs, **can be managed from one centralized location. For example, adding new anti-virus updates or updating multiple workstations with the Microsoft Service Pack 5.0 can be accomplished using IC3's System Agent.** This avoids user interruption by remotely executing/sending multiple files and applications from the IC3 Control Center. This queries PCs for hardware and O/S configurations and new SNMP capability for enterprise integration.

Other applications:

PCs can be re-imaged on a scheduled basis with daily, automated refreshes, excellent solutions for classroom and training center environments. PC rollouts and OS migrations utilizing IC3's standalone and multicast client functionality allow multi-faceted rollouts of new applications or the migration of entire systems to new operating systems (Windows 95/98/NT or Windows 2000). Other features include Disk-to-Disk Copy, integrated SID creator for NT workstations, Ethernet, Token Ring, Windows 95/98/NT and Novell systems support.

"I recently looked at Symantec's Ghost Enterprise Edition 6.0 and Altiris eXpress 4.0 but Innovative Software's Image Cast 3 (IC3) was the best product, and at the lowest cost... IC3 has the edge in ease of setup and use." "IC3 uses relatively small installation files instead of storing complete disk images, which makes finding image files much easier. The documentation is excellent, making the product very easy to use," according to Mike Avery (InfoWorld Test Center, 3/3/2000).

"In PC Week Labs' tests, the software, demonstrated strong ease use and flexibility for handling PC migrations or refreshes." "Image Cast IC3's substantial flexibility and easy GUI configuration make it reliable and suitable for any cloning operation," according to Ken Phillips for (PC Magazine, 2/7/2000).

FORTUNE 100 COMPANIES WITH IMAGECAST IC3
